KHRA = ★ S03 91-309159/42 ★SU 1610-429-A
Ultrasonic test device of pipes - has pulley system to move slides
with converters along pipe and drive to rotate pipe through probe
width

KHARK RADIO ELECTRO 25.01.88-SU-367605
(30.11.90) G01n-29/04

25.01.88 as 367605 (1503AS)

Uprights (12) are removed, test pipe (22) is placed on the rollers
fixed on support legs (20) on base (1) and uprights (12) are replaced
and connected to guides (5,6) before reversible drive (10) is started
and acts through a pulley system to turn pulleys (13-16) and move
cables (17-19), causing movement of slides (7,8) with converters (9)
in one direction, while carrying out testing of the article during an
established width of probing.

when slide (8) contacts one of limiters (21), reversible drive (10)
is disconnected and the drive of the rollers is switched on, to rotate
the pipe through an angle determined by the width of probing.
Reverse rotation of reversible drive (10) is simultaneously engaged
and the ultrasonic converters on the slides begin to move in the
opposite direction, while carrying out testing of the pipe along the
next probing strip.

USE - Ultrasonic testing of pipes. Bul. 44/30.11.90 (3pp
Dwg.No.1/2)
N91-236892

GREB/ ★ S03 91-309160/42 ★SU 1610-430-A
Piezoelectric converter - has movable prism to set required gap to
surface of test object

GREBENNIKOV V V 28.12.87-SU-401982

(30.11.90) G01n-29/04

28.12.87 as 401982 (1503AS)

Prism (3) with a piezoelement and a damper is placed in the body
with amovement capability. The converter is connected through a
socket in threaded sleeve (5) to the flaw detector and is set on the
test article. Contact fluid is passed through inlet (7) into the
container formed by the lower edges of the body. The require gap is
set between prism (2) and the article and testing is carried out.

USE - Testing articles. Bul. 44/30.11.90 (3pp Dwg.No.1/3)
